Cable Protector Under Truck Tire

Combine for
Longer Lengths

Bailey-Parks Urethane, in conjunction with our local utility company, has developed a rough service Cable Protector that has been in service for years.

As you can see from the illustration, these can be interlocked for an almost unlimited length, for cable, hose, and/or wire protection from the heaviest road or construction site traffic.

This cable protector can be molded in almost any color and we can even private label so that your logo and/or your telephone number are molded in for years of advertisement and contact information.

If this configuration does not meet your needs, please contact us with your particular design requirements. We have a fully equipped in-house design and tooling department that can engineer and make your unique part per your specifications.

The current size is 48" long by 6" wide by 1.5" high with a 28° bevel (ramp) on both sides. The hole diameter is 0.70" with a slot to aid in inserting the cable into the hole.
