

# Belt Skirting Solutions

**The Beveled Diamondback® GP Skirt** - Is long lasting, practical and RATTLESNAKE tough for most applications. Processed with Bailey-Parks top quality material, the beveled Diamondback skirt decreases wear on your belt while simultaneously protecting the conveyor.

Bailey-Parks beveled skirt outlasts other products such as steel, UHMW and rubber by a minimum of 2-1. These skirts can be produced up to 50' long continuously. Employing beveled edges from 45° down to 20° allows you to choose the skirt that lays flatter and provides the best seal, which keeps the product contained along the belt. See chart to the right for reference point and angles.
